Litect Submission

Luberculosis sequencing and mapping teams, Sanger Centre, Wellcome tuberculosis sequencing and mapping teams, Sanger Centre, Wellcome tuberculosis sequencing and mapping teams, Sanger Centre, Wellcome Campus, Hinxton, Cambridge CB10 15A Unite de Genetique Moleculaire Bacterienne, Institut Pasteur, 28 rue du Docteur Roux, 75724 Paris Cedex 15, France E-mail: parkhill@sanger.ac.uk

On Jun 27, 1998 this sequence Version replaced gi:1237042.

Notes:

Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the oil gene designations are in brackets after the new gene numbers.

Gene prediction was based on a Hidden Markov Model of TB genes of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C.

CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, of y or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon) if this cannot be identified we choose the most upstream initiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /product="hypothetical protein Rv2191"

/gote-"Similar to Mycobacterium tuberculosis hypothetical ABC transporter ATP-binding protein RV326c or MTC73G12.08 SW:XN26_MYCTU (P71886) (697 aa) fasta scores: E(): 0, 76.3% id in 697 aa. Shares similar domains with many ABC-type transporters e.g. Streptomyces roseofulvus ATPase component of putative ABC transporter fnnD TR:068910 (EMBL:AF088302) (524 aa) fasta scores: E(): 8.4e-14, 31.5% id in 495 aa and Synechococcus SP: nitrate transport ATP-binding protein Nrto nrto SW:NRTD_SNNP7 (P38046) (274 aa) fasta scores: E(): 1.6e-12, 34.8% id in 198 aa. Previously sequenced as TR:032971 (EMBL:298741). Contains hydrophobic, possible membrane-spanning regions. Contains 2 fram matches to entry PF000005 ABC_tran, ABC transporter. Contains 2 x PS00017 ATP/GTP-binding site motif A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /translation="MPLRPTNAASERVTKRTATETILORMVGARQDSEKKGSLFNRGT
